

Delivery360 | Release Readiness Checklist

Jalpa Parmar | Technical Project Manager

Use this checklist in a release review. Statuses are sample inputs, not an automated Go / No-Go result. Record evidence, owner and decision in the actual project process.

Area	Sample status	Evidence / question
Scope	Green	What is complete, moved or excluded?
QA regression	Amber	Is remaining coverage staffed and scheduled?
Critical defects	Red	Have fixes been retested and accepted?
Dependencies	Amber	Is the integration handoff confirmed?
Operational readiness	Green	Monitoring, support and on-call owner ready?
Communication	To confirm	Are stakeholders and customers informed?
Approvals	Pending	Who records the release decision?
Rollback / contingency	To confirm	Is the fallback rehearsed and owned?

PM follow-up

Review critical issues; escalate the dependency; confirm QA capacity; revisit the evidence with named stakeholders. Keep any release decision and rationale in a human-owned record.

Independent illustrative checklist using synthetic status values.
