

SmartServe | Personas & User Journey

Jalpa Parmar | Independent product concept

Fictional personas

Persona	Need	Uncertainty to validate
Mira, service coordinator	See every change request and its owner	How requests arrive and get assigned today
Sam, customer	Receive a clear response to a change	Preferred channel and acceptable wait time

Illustrative journey

Step	Customer	Coordinator	Product opportunity
Request	Submits a change	Receives new item	Capture essential context
Review	Waits for answer	Checks availability and assigns owner	Show status and responsibility
Confirm	Receives outcome	Sends confirmation	Make the decision explicit

What I would validate

Observe a small number of real request handoffs, identify missing information and test whether the queue removes ambiguity. These personas and journey are fictional, not a claim of completed research.
