

SmartServe | Illustrative Product Roadmap

Jalpa Parmar | Independent product concept

A sequence of learning, not committed delivery dates. Priorities use fictional assumptions and would change after user validation.

Now	Next	Later
Capture requests, queue, assign owner, confirm outcome	Message templates, request history, basic exception handling	Explore calendar integration and additional reporting only if demand is validated

Decision gates

After Now: Can coordinators close requests without losing ownership? **Before Next:** Are repeat responses a real source of friction? **Before Later:** Does integration value justify setup and maintenance?

Illustrative independent concept; no delivery commitment or user research claim.
